

THUNDER EAGLE, INC. Wireless Alerting Systems

Introducing FipsServer™

Professional Integrated Weather Information and Alerting System

The next generation of Thunder Eagle's legendary weather information systems combines local, regional and national weather information in customer-configurable websites and alerting systems with features that include:

- NWS alert messages from the nationwide digital database
- NOAA Weather Radio SAME/EAS alerts
- Streaming NOAA Weather Radio
- NWS digital and graphical forecasts
- Local Traffic Cameras
- Local professional weather sensor readings
- NWS Satellite and Radar images
- Customized local radar images
- Email and SMS alerts
- Local emergency messages and information
- Local photo gallery
- Ethernet-enabled printing of SAME/EAS alerts
- Ethernet-enabled LED signboards

Additional features:

- Remote server for added reliability
- Uses existing Alert Eagle 120 and 400 units
- Can be integrated with two-way and trunked radio systems
- Websites are easily customer-customizable, including logos and links
- Websites are easily displayed on flat-screen TV displays
- Customers can easily add the website as a link to their existing website
- Desktop alerting allows notices to be delivered to individual users

The FipsServer system is designed to be both reliable and flexible. Thunder Eagle will create plug-and-play hardware and software resources based on each client's needs and assist in integrating FipsServer with the user's existing systems. Thunder Eagle will continue to monitor, maintain and support each client website for an annual fee which includes web hosting, email hosting and telephone support.
